PROFILE

Software engineer building production mobile and web products with React Native, Expo, React and TypeScript. At Waracle, I deliver reusable mobile components, reliable account flows and measured performance improvements for a financial technology client. I also ship independent iOS and Android apps end to end.

EXPERIENCE

Waracle | Software Engineer, mobile client engagement **2026-Present**

- Delivered five reusable mobile UI capabilities for the client's Alpha1 release, including accessible form controls, navigation and empty states; all merged across five pull requests before the release was marked complete.
- Built a seven-field Personal Details flow with validation, offline handling and cache updates. Identified a backend update contract that could overwrite newer data and aligned a changed-fields approach with backend engineers before release.
- Profiled a 240-article News feed across 18 Android release-emulator runs. Reduced median peak memory by 27% during loaded scrolling and 15% during pagination in controlled comparisons, while eliminating overlapping load-more requests.
- Hardened login failures with distinct offline and authentication states, automatic recovery and cancellation-safe handling; validated focused regressions with 27 tests and Android device checks.

VirtualE | Frontend Engineer **2023-Present**

- Built an admin onboarding system that let non-technical staff manage company records, accelerating customer onboarding by several weeks.
- Refactored legacy React features and improved load time by 30%; delivered notification and productivity features associated with a reported 24% engagement increase.

Royz Rental | Lead Software Engineer, part time **2024-Present**

- Built the company's web presence, booking and eligibility workflows, and operational reporting tools, taking the business beyond a third-party rental listing.

Freelance | Web and Mobile Developer **2022-2023**

- Delivered client websites and commerce work across education, rental and retail; migrated a Wix store to Shopify in two weeks while preserving orders and service continuity.

Threepipe Reply | Developer **2021-2022**

- Automated SEO data validation with Python, SQL and Alteryx, cutting manual cross-referencing from hours to minutes and increasing team productivity by a reported 60%.

SELECTED PRODUCTS

Quick Teams | iOS and Android team generator **srmakes.co.uk**

- Built and released a React Native/Expo app that generates balanced teams from player inputs; added analytics, crash monitoring and Expo over-the-air delivery for subsequent updates.

Foodii | Restaurant companion app and website **foodii.co.uk**

- Owned mobile and web implementation across React Native, Expo, React and Supabase, from architecture and backend integration to store releases and iteration.

SRMakes | Product showcase and validation platform **srmakes.co.uk**

- Built reusable project pages from Supabase content, with waitlists and feature feedback secured by row-level access controls and atomic database operations.

TECHNICAL SKILLS

Mobile and frontend: React Native, Expo, React, TypeScript, JavaScript, accessibility, performance profiling

Backend and delivery: REST APIs, Supabase, PostgreSQL, Firebase, Git, CI, Expo EAS, Sentry, Amplitude

AI-assisted development: coding agents, model context protocol (MCP) tools, prompt design, code review and verification

EDUCATION

Queen Mary University of London | BSc Computer Science, First Class Honours
