Frontend-focused Software Engineer specialising in React and React Native who has delivered measurable business impact at Royz Rental - increasing revenue and building brand recognition that put the company on the map digitally, while also creating multiple production-grade mobile applications. I excel at end-to-end feature ownership, from initial build through user experience optimisation, with expertise across frontend, APIs, and databases for both Mobile and Web platforms.

Experience

Royz Rental – Technical Operations & Lead Developer | *React JS, JavaScript, Excel* **04/2024 - CURRENT**

Led the technical transformation of a growing car rental business with 5 employees, owning all customer-facing platforms and internal operational systems, primarily with the introduction of their first website. Also managed technical operations across a fleet of 15+ vehicles, supporting increased booking volume and operational growth.

- Transformed a business with zero online presence beyond Turo into a digitally-enabled operation by developing an SEO-optimised website, contact systems, and booking processes that attract 1000 monthly visitors and generate a minimum of 8 bookings per month, despite working in a non-technical company environment
- Engineered a custom booking and eligibility system integrating form validation, API-driven workflows and automated messaging, reducing manual intervention and improving response times.
- Built internal financial reporting and revenue-tracking tools, centralising data into structured dashboards to support operational decision-making.

Frontend Engineer | VirtualE (Early-Stage Startup) | *React JS, TypeScript, MongoDB* **11/2023 - CURRENT**

- Eliminated manual database onboarding by creating a user-friendly admin system that enabled non-technical leadership to independently manage company additions, saving developer time and streamlining critical onboarding processes, accelerating customer onboarding by several weeks. Delivered a seamless UX with state management, editable/sortable tables, form handling, and API integration.
- Designed and integrated a scalable notification system and Pomodoro timer feature in close coordination with the backend team, resulting in a 24% boost in user engagement through timely feedback loops and productivity tools.
- Partnered with the product team to transform research insights into intuitive, user-driven features, ensuring product direction remained tightly aligned with both user needs and business objectives.
- Modernised and refactored legacy front-end code, seamlessly integrating new features into the existing system while reducing technical debt. Improved load times by 30% through performance tuning, with a strong emphasis on code quality, maintainability, and scalability.

Freelance Developer – React & React Native | *React JS, React Native, Shopify, Typescript, Supabase…* ***10/2022 - 11/2023***

Built multiple web and mobile projects for various clients, from perfume to tuition companies, focusing on simplicity, responsiveness and meeting the targets set by clients. All the projects can be found in my portfolio (https://srmakes.co.uk)

- Delivered solutions across SEN services, education platforms, mobile applications and e-commerce businesses.
- Led a successful e-commerce platform migration from Wix to Shopify with 100% uptime maintained, zero customer disruption, and all existing orders preserved within a tight 2-week project deadline
- Applied best coding practices such as DRY, SOLID, and modular component-based architecture for maintainable and scalable codebases. Ensured high performance and optimised applications for speed, SEO, and accessibility.
- Integrated third-party services and APIs, including authentication (OAuth, Clerk), real-time databases (Relational & NoSQL), and analytics tools.

Threepipe Reply | *Developer | Python, Pandas, MySQL, React JS* ***10/2021 - 11/2022***

- Delivered 60% productivity increase for the SEO team by automating the weekly data validation process, reducing manual cross-referencing time from hours to minutes while eliminating human errors
- Used Python and Pandas for efficient data manipulation and analysis, ensuring accurate insights extraction. Developed a comprehensive tool for analysing marketing trends and identifying AD units, streamlining data collection and storage into a centralised spreadsheet from sources such as TikTok, Snapchat and Facebook.

Projects

Quick Teams (https://apps.srmakes.co.uk/projects/quick-teams) | *React Native, Expo, Supabase, Clerk* ***11/2024 - 01/2025***

- Developed a full-stack cross-platform mobile application with the use of React Native and Expo, incorporating offline-first methodologies and real-time data synchronisation via Supabase.
- Implemented modern development practices utilising TypeScript for enhanced code maintainability and leveraged Expo's new router navigation for streamlined, efficient routing, ensuring the application was built with up-to-date technologies.

Foodii (https://www.foodii.co.uk) | *React Native, Expo, Supabase, React JS, Vercel* ***09/2022 - 02/2023***

- Built a full-stack mobile application and website from scratch using React, React Native and Supabase. Owned frontend, backend, architecture, deployment and iteration. Gained deep experience with hooks, API integration, cross-platform deployment (iOS/Android) and UX optimisation.

Product Launchpad & Validator (https://www.apps.srmakes.co.uk) | *React, Supabase, Tailwind, JavaScript* ***11/2025***

- Created a validation-first development approach that eliminates building unwanted features by letting users guide product growth through waitlists and direct feedback, focusing development time only on confirmed market demand
- Built a server-driven UI system using Supabase JSONB for replicable page creation across multiple startup MVPs, enabling non-technical team members to make content changes without frontend coding
- Engineered a complex dynamic theming engine using Tailwind Safelists to inject project-specific colour identities at runtime, giving every concept a unique brand feel within a single codebase.
- Implemented React Query (TanStack) for aggressive caching and optimistic UI updates, ensuring instant feedback for user interactions (e.g., voting/waitlists) while minimising server load.
- Moved complex business logic to the database level using Supabase RPCs (Remote Procedure Calls) for atomic transactions, secured by strict Row Level Security (RLS) policies.

Technical Skills

Frontend: React, React Native, TypeScript, JavaScript, Expo, Zustand, TanStackQuery, React Context, Expo Router
Backend & APIs: REST APIs, Supabase, Firebase, Authentication (OAuth, Clerk)
Databases: PostgreSQL, MongoDB, Relational Databases, MySQL
Monitoring & Analytics: Sentry, Amplitude
Tools: Git, Vercel, CI workflows, EAS Workflows
Other: Performance Optimisation, SEO, Agile

Non-Technical Experience

Queen Mary University / CFBS / Private - *Teaching Assistant / Tutor* ***09/ 2016 - 07/2020***

- In educational institutions, I taught students in the same year and below modules I excelled in, such as Physics at A-level, where I taught one-to-one and in groups. Similarly, I was a personal tutor for GCSE students across all subjects.

SamiAnime Brand - *Owner* ***08/2016 - 10/2023***

- At age 15, I began creating a presence on the YouTube platform, amassing 100,000 views regularly and building a fan base. Current channel total viewership = 2 million, Total viewership = 23 million

Education

Queen Mary University of London | *B.Sc. in Computer Science (Bachelor's degree)* ***Achieving a 1st***
Relevant Coursework: Algorithms and Data Structures, OOP, Software Engineering, Database Systems, Computer Systems Networks, User Interface Design, Game Development
